KRIDTECH

LETTER OF RECOMMENDATION

Date: 16th November 2026

TO WHOM IT MAY CONCERN,
I am pleased to recommend **Mr. Ganesh Raju Angadi**, who worked with us at **Kridtech** as a **Founding Software Engineer (Intern)**, contributing to the development of **Vaniger**, our AI-powered outbound calling platform.

During his three-month internship, Ganesh played a significant role in developing the platform's backend infrastructure. He engineered a substantial portion of our backend systems, worked on latency optimization, and contributed to payment gateway integrations, calling APIs, and AI-powered functionality.

However, what impressed me most about Ganesh was not simply his technical ability, but his **sense of ownership, reliability, and remarkably straightforward approach to problem-solving.**

I recall several occasions when development required frontend changes, but a frontend engineer was not immediately available. Rather than allowing the work to remain blocked, Ganesh took the initiative to implement the necessary changes himself, despite his primary responsibilities being in backend engineering. He consistently prioritized getting the product working over limiting himself to his assigned role.
Another notable contribution was his work on Vaniger's AI suggestion system. Ganesh helped resolve issues affecting the suggestions, refined the underlying prompts, and worked to improve the system's functionality. His involvement demonstrated an ability to work across conventional software engineering and AI integration challenges.

Ganesh also displayed strong communication and collaboration skills. He was consistently direct about requirements, realistic about deliverables, and honest about technical limitations. He rarely needed excessive supervision and was willing to guide other members of the engineering team whenever necessary.
What I particularly appreciated was his genuine enthusiasm for engineering. He approached his responsibilities with consistency and dedication, demonstrating an interest in solving problems rather than simply completing assigned tasks. Even after his formal internship concluded, he continued supporting our team through technical handovers and knowledge transfer.

If circumstances permitted, I would gladly retain Ganesh as a full-time member of our engineering team. His technical capabilities, initiative, and dependable approach to work would make him a valuable addition to any engineering organization.

It has been a pleasure working with Ganesh, and I am confident that he will continue to grow as an engineer. **I am happy to recommend him for opportunities in software engineering, backend development, and related technical roles.**
